Subject Index of Volume 169

Abrasion
a study on the dynamic characteristics of abrasion for high-chromium alloys, 1
Abrasive wear
microscopic observations of the abrasive wear of zirconia ceramics, 273
Al–Zn–Pb bearing alloy
friction and wear of Al–Zn–Pb bearing alloy, 201
Aluminium alloy
erosion and corrosion characteristics of an aluminium alloy–alumina fibre composite, 119
Antiwear additives
review of antiwear additives for crankcase oils, 87
Asperities
asperity–asperity contact mechanisms simulated by a two-ball collision apparatus, 33
Austenitic–bainitic ductile iron
contact fatigue behaviour of an austenitic–bainitic ductile iron, 153

Ball charge
simulation of ball charge and liner wear, 77
Bearing steel
effect of tricresyl phosphate on wear of silicon nitride sliding against bearing steel, 127
Bed particles
some effects of bed particle properties on wear in fluidized bed combustors, 141
Boride ceramics
friction and wear of boride ceramics in air and water, 63
Boundary lubrication
tribological properties of silicon nitride ceramics coated with molybdenum films under boundary lubrication, 181

Carbon materials
failure of tungsten carbide–cobalt alloy tools in machining of carbon materials, 135
Ceramic elements
failure modes of pre-cracked ceramic elements under rolling contact, 69
Ceramics
friction and wear behavior of diamond films against steel and ceramics, 221
friction and wear behaviour of C- and SiC-fibre-reinforced glass composites against ceramic materials, 243
Collision
asperity–asperity contact mechanisms simulated by a two-ball collision apparatus, 33
Composite
erosion and corrosion characteristics of an aluminium alloy–alumina fibre composite, 119
Contact fatigue
contact fatigue behaviour of an austenitic–bainitic ductile iron, 153
Contact pressure
simple analytical procedure for the determination of the contact pressure of a layered surface on a rigid backing, 189
Cr_2O_3
plasma-sprayed coatings treated with lasers: tribological behaviour of Cr_2O_3, 173
Crankcase oils
review of antiwear additives for crankcase oils, 87
Cr ion implantation
the tribological properties of a pure iron surface modified by Cr ion implantation, 231
Cutting forces
modelling of tool wear based on cutting forces in turning, 25
Cylinder liners
an improved profilometric technique for wear computation and its application in two-stroke engine cylinder liners, 265

Diamond films
friction and wear behavior of diamond films against steel and ceramics, 221
Diamond grinding wheels
a model for the topography of diamond grinding wheels, 237

Elastomers
physical modification of elastomers to improve their tribological properties, 257
Electroactive polymeric films
tribological properties of electroactive polymeric thin film bearings, 43
Engine oils
the friction and wear of fresh and used engine oils during reciprocating sliding, 167
Extreme pressure additive
the effect of an extreme pressure additive on the tribological behaviour of steel rollers with surface irregularities, 107

Failure
failure of tungsten carbide–cobalt alloy tools in machining of carbon materials, 135
Failure modes
failure modes of pre-cracked ceramic elements under rolling contact, 69
Finish milling
estimation of tool wear length in finish milling using a fuzzy inference algorithm, 97
Finite element analysis
elasto-plastic finite-element analysis of 2-D rolling-plus-sliding contact with temperature-dependent bearing steel material properties, 251
Fluidized bed combustors
some effects of bed particle properties on wear in fluidized bed combustors, 141
Friction
mechanism of destructive changes in oxide-covered surfaces caused by friction, 209

Glass composites
friction and wear behaviour of C- and SiC-fibre-reinforced glass composites against ceramic materials, 243

High-chromium alloys
a study on the dynamic characteristics of abrasion for high-chromium alloys, 1

Interference
estimation of tool wear length in finish milling using a fuzzy inference algorithm, 97
Iron
the tribological properties of a pure iron surface modified by Cr ion implantation, 231

Lasers
plasma-sprayed coatings treated with lasers: tribological behaviour of Cr_2O_3, 173
Layered surface
simple analytical procedure for the determination of the contact pressure of a layered surface on a rigid backing, 189
Liner wear
simulation of ball charge and liner wear, 77

Machine elements
lubrication of machine elements during combined squeeze and sliding motion, 161
Machining
failure of tungsten carbide–cobalt alloy tools in machining of carbon materials, 135
Mathematical model
a model for the topography of diamond grinding wheels, 237
Modelling
modelling of tool wear based on cutting forces in turning, 25
Molybdenum films
tribological properties of silicon nitride ceramics coated with molybdenum films under boundary lubrication, 181

Oscillating contact
the significance of temperature effects for the behaviour of thin lubricant films in an oscillating contact, 59
Oxide-covered surfaces
mechanism of destructive changes in oxide-covered surfaces caused by friction, 209

Physical modification
physical modification of elastomers to improve their tribological properties, 257
PPC cutters
measurement of forces, temperatures and wear of PDC cutters in rock cutting, 9
Profilometry
an improved profilometric technique for wear computation and its application in two-stroke engine cylinder liners, 265

Reciprocating sliding
the friction and wear of fresh and used engine oils during reciprocating sliding, 167
Rock cutting
measurement of forces, temperatures and wear of PDC cutters in rock cutting, 9
Rolling contact
failure modes of pre-cracked ceramic elements under rolling contact, 69
elasto-plastic finite-element analysis of 2-D rolling-plus-sliding contact with temperature-dependent bearing steel material properties, 251

Semi-dry journal bearing
on the dynamics and stability of a semi-dry journal bearing, 215
Silicon nitride
effect of tricresyl phosphate on wear of silicon nitride sliding against bearing steel, 127
Silicon nitride ceramics
tribological properties of silicon nitride ceramics coated with molybdenum films under boundary lubrication, 181
Simulation
simulation of ball charge and liner wear, 77
Sliding contact
elasto-plastic finite-element analysis of 2-D rolling-plus-sliding contact with temperature-dependent bearing steel material properties, 251
Sliding motion
lubrication of machine elements during combined squeeze and sliding motion, 161
Squeeze motion
lubrication of machine elements during combined squeeze and sliding motion, 161
Steel
friction and wear behavior of diamond films against steel and ceramics, 221
Steel rollers
the effect of an extreme pressure additive on the tribological behaviour of steel rollers with surface irregularities, 107
Surface irregularities
the effect of an extreme pressure additive on the tribological behaviour of steel rollers with surface irregularities, 107

Temperature effects
the significance of temperature effects for the behaviour of thin lubricant films in an oscillating contact, 59
Thin film bearings
tribological properties of electroactive polymeric thin film bearings, 43
Thin lubricant films
the significance of temperature effects for the behaviour of thin lubricant films in an oscillating contact, 59
TiCN coating
sliding wear resistance of TiCN coatings on tool steel made by plasma-enhanced chemical vapour deposition, 195
Tools
failure of tungsten carbide–cobalt alloy tools in machining of carbon materials, 135
Tool steel
sliding wear resistance of TiCN coatings on tool steel made by plasma-enhanced chemical vapour deposition, 195

Tool wear
modelling of tool wear based on cutting forces in turning, 25
estimation of tool wear length in finish milling using a fuzzy inference algorithm, 97
Tricresyl phosphate
effect of tricresyl phosphate on wear of silicon nitride sliding against bearing steel, 127
Turning
modelling of tool wear based on cutting forces in turning, 25
Zirconia ceramics
microscopic observations of the abrasive wear of zirconia ceramics, 273
